Drafting an emerging picture

Name:	Dhruval Patel
Community (UN SD goal):	Zero Hunger & Good Health and Well Being
Date:	05-11-2021

Instructions:

Using your researched information fill out the flowing comparing the current state of the art with what you think new (software) innovations could bring to the community

Covering the orientations	
Compare the left-hand column of the document "Technology configuration inventory" table with the right-hand column of the document "Community characteristics & orientation" table. What do you notice about the match (or mismatch) between your dominant community orientations and the current configuration of tools?	
How well does the technology inventory cover the orientations? What themes emerged from both the community orientations and the technology configuration from your colleagues' notes	Well with the help of proposed technology we can help a lot of people who are in need of food and also able to communicate within internal NGOs for better and efficient use of resources.
☒ Are you almost there? ☒ Are there big gaps?	The answer of this two question is somewhat between them. Means we have tried to reach out as much as possible although we are not completely there. And also there is some gap not a big one between communication and reaching out to them.
What is the range of skills? If their interests and/or skills are diverse, could it cause conflict or distraction?	There are very less chances of conflict or distraction as they are inter communicating with each other and fulfilling each other requirements when needed.
Achieving integration	
Look at all the pieces of your configuration	
What level of integration and interoperability has been achieved?	Currently there are some level of integration achieved like NGOs has certain amount of data for homeless people. Many NGOs are communicating internally.
Where are there big gaps	Not every NGOs were known to everyone. To fill this gap the project is introduced.
Balancing the polarities (Current state)	
How is the configuration balanced with respect to each polarity?	

Synchronous >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Via app all NGOs are inter connect to each other.	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Asynchronous** NGOs data will help to locate the homeless people.
Participation >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> All volunteers participation is needed	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Reification** …
Group >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> Group of NGOs can contribute at their end.	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Individual** Individual people like to donate can provide their contributions
How well does this balance fit your community?	In current state it is observed that Asynchronous mode in use for the distribution.

Solution seeking

Synchronous >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> With the proposed system the current NGOs can able to communicate and synchronous in more efficient manner.	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Asynchronous** With single Person donate, people can able to done by their own and doesn't required and NGOs of that.
Participation >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> NGOs can register themselves in the app and also see the volunteers they have they need internally.	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Reification** …
Group >>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>> People from different community need to help other can easily to volunteer any NGOs from the app.	<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<<< **Individual** Individual people by their own can contribute towards society if they want.

MVP notes

Initial stage is to develop an common platform for all NGOs to connect with each other. Furthermore, develop an single donor module for helping individually people.
